Seasonal Spotlight

Field Notes from BioWorks

CEASE™:

July 2008

Improving Performance On Your Plants.

When using CEASE, adding a surfactant or spreader-sticker will dramatically increase canopy penetration, coverage, and residency time on plant leaves. CEASE is not rain-fast alone: rainfall, dew and overhead irrigation can affect results if a spreader-sticker is not added.

(As with any tank mixes, check for phytotoxicity on a small portion of the crop when adding a surfactant.)

CEASE's liquid formulation is highly suspendible and is compatible with most pesticides, fertilizers and adjuvants, including many commonly used spreader-stickers and organosilicone wetting agents.

CEASE has proven effectiveness in fighting both fungal *and* bacterial pathogens. It provides outstanding plant and environmental safety with only a 4-hr REI, and leaves no residues on plant foliage or flowers. With multi-site modes of action, CEASE is a superior resistance management tool.
