## RootShield® WP

A new and improved wetttable powder!

BioWorks' newest product, RootShield WP -- now EPA Approved -- includes a proprietary, completely water soluble carrier.

**What does this mean? - Virtually clay-free formulation - No Clogging - Easier mixing**

**RootShield WP** biological fungicide contains the same active ingredient (*Trichoderma harzianum*, strain T-22) as RootShield® Granules and PlantShield® HC. Drench **RootShield WP** into your soil for protection against root rot pathogens including *Pythium*, *Fusarium*, *Rhizoctonia*, *Thielaviopsis* and *Cylindrocladium*. Within 24-hours it blocks and actively attacks pathogens by "eating" them, ensuring uninterrupted plant growth.

The new **RootShield WP** has a broader label to include more crops and field chemigation. And just like RootShield Granules, it has a 0-hour REI -- the lowest of all biological fungicides, and costs less than 1-2¢ per 6-inch pot for 10-12 weeks of protection. (OMRI application submitted.) [Click here to see the complete label and updates on state approvals!](#)

### Excellent for drip and boom applications

#### Compatible with:

- » either micro-irrigation or emitter drip systems
- » small spray nozzles
- » water tunnel equipment

**Does not clog solenoid valves or prevent operation**

**Now is the perfect time to use RootShield for protection on foliage plants, stock plants, overwintering perennials and woody liners. Shield plants from root-damaging pathogens. One application lasts 10-12 wks!**

[\(Check for your state registration approval for RootShield WP here.\)](#)

**BioWorks is proud to be a Platinum Sponsor of the GrowerTalks Sustainability Conference, Nov. 7 & 8 in Frisco, TX -- come visit us there!**
