Results:
- The BotryStop treatments were significantly different from the untreated control, with a similar performance to the chemical standard.

Methods:
- Chemical standard was two applications of Rovral 4F (iprodine) at 16 fl oz/acre followed by one application of Quintec (quinoxyfen) at 6 fl oz/acre.
- Three applications were made on March 7th, March 12th, and March 18th over the flowering period.
- The disease incidence (mean number of infected shoots per tree) was measured 12 days after the last treatment.
- In the graph, columns sharing the same letter are not significantly different.

Refer to product labels for complete application details. Additional technical information is available on our website (www.bioworksinc.com) or from your BioWorks technical sales rep. Always read and follow label instructions.
