

FOR IMMEDIATE RELEASE

MYCOTROL[®] ESO BIOPESTICIDE NOW AVAILABLE IN THE U.S.

Victor, New York (July 28, 2016) – BioWorks, a customer-focused provider of safe, proven and effective biopesticides and biofertilizers, today announced Mycotrol[®] ESO, an organic mycoinsecticide, is now registered in all U.S. states. It can be used in greenhouses, nurseries and on turf and vegetables as well as landscapes and interiorscapes.

Mycotrol ESO is the organic version of BotaniGard[®] ES and is highly effective for the control of whitefly, thrips, aphids and many other insects. Based on the highly successful fungus, *Beauveria bassiana* strain GHA, it is versatile enough to use as a stand-alone, as a tank mix partner or in rotation with other insecticides.

Mycotrol ESO is exempt from residue tolerances, has a 0-day pre-harvest interval and a 4-hour REI. There is no limit to the number of times it can be applied in a season and is compatible with many beneficial insects.

“Mycotrol ESO is an important tool for many of our growers,” said Joe Gionta, Director of Marketing and Sales. “It enables growers to control many troublesome insects with an organic product registered with the Washington State Dept. of Agriculture.”

About BioWorks

BioWorks provides reliable, environmentally responsible, personalized solutions to growers, farmers and superintendents who manage plant/turf diseases, pests, nutrition and health.

For more than 20 years BioWorks has been helping our customers in the horticulture, agriculture and turf markets develop effective and efficient custom programs using products

that are safe and proven. We are continuously reinventing the way our customers work by providing biologically-based, integrated, safe solutions and programs.

BioWorks is a founding member of the BioPesticide Industry Alliance and also a proud sponsor of the [AFE scholarship program](#), funding the 'BioWorks IPM/Sustainable Practices Scholarship'. For more information, please visit www.bioworksinc.com.
