

BotaniGard® MAXX

Insecticide

Control of Whitefly (*Bemisia tabaci*) on Field Tomatoes

BotaniGard MAXX sprayed weekly for three weeks on field tomatoes for control of whitefly was shown to effectively reduce insect populations comparable to a conventional chemical insecticide. BotaniGard MAXX was applied at 3.4, 6.9, 10.3 and 13.7 fl oz/acre. A conventional dual active ingredient insecticide containing thiamethoxam + lambda-cyhalothrin was used as the chemical standard.

Results showed (71 – 74%) control of whitefly nymphs and adults for the three highest rates of BotaniGard MAXX.
